

Participants should use caution when feeding greyhounds products that may contain caffeine or theobromine. The Commission has seen an increase in the number of race-day urine samples returning positives to Caffeine and its metabolites which include theophylline, paraxanthine and theobromine.

Foods or medications that contain caffeine

- Coffee and coffee containing products
- Chocolate and chocolate containing products
- Energy drinks and colas
- Teas and iced tea drinks
- Supplements used to “boost energy or endurance”
- Cold and flu medications
- Collovet oral suspension
- Green tea additives or antioxidants

Amulase, Protease, Lipase, Cellulase, Lactase	
*Daily value not established	

Other Ingredients: Purified Water, Glycerin, Natural Flavors, Potassium Sorbate & Sodium Benzoate (to protect freshness), Sucralose.

Participants should check the label of any food or supplement product to ensure it does not contain caffeine or any of the above.

Participants are advised to avoid using any supplements close to the time of racing as the contents of supplements cannot be guaranteed due to a lack of regulation of supplements and many are contaminated with prohibited substances, including caffeine.

If participants are unsure of any ingredients on their food or supplement labels they can contact the Commission’s Chief Vet on (02) 6330 4311.

R83A Raceday Treatment

(1) No person without the permission of the Stewards may administer or cause to be administered any treatment to a greyhound at any time on the day of the meeting until that greyhound is no longer presented for an Event.

Compliance with GAR 83A will minimise the risk of testing positive by providing supplements or food to a greyhound that contains caffeine.
